The Fisheries *Refugia* Interactive Mapping Tool

The South China Sea Project's Regional Working Group on Fisheries is establishing a regional system of fisheries *refugia* in the South China Sea and Gulf of Thailand. This initiative is aimed at building the resilience of Southeast Asian fisheries. The interactive mapping tool below shows sites selected for inclusion in an initial system of fisheries *refugia*, other sites important to the life-cycles of fish species of transboundary significance, and the South China Sea Project's suite of habitat demonstration sites.
