## Legal and Policy Frameworks for PES

## International Experience

#### **Essential Components for Ecosystem Services Market Growth Public Payment Open Trading** Self-Organized **Schemes Private Deals Identified Ecosystem Services** Component 1 (includes ecosystem services for available for both current and future payments / markets) **Enabling Legal, Regulatory, & Administrative Context** Component 2 (includes positive context for ecosystem service payments and markets) **Supporting Institutions** Component 3 (includes, public or private entities that facilitate / oversee public funds, regulate private trade, etc.) **Engaged Local Communities & Stakeholders** Component 4 (includes: communities, NGO's, financial institutions, businesses, government, etc.) Component 5 Flow of Market Information **Technical Assistance** Component 6 (to sellers, buyers, and other market actors, which includes training, education, and advising) Financing Component 7 (for all needed components, including: ecosystem management costs, transaction costs, etc.) **Support Services For Market Actors Component 8** (such as: brokering, legal advice, measurement and valuation of ecosystem services, 3<sup>rd</sup> party verification, accounting, computer technology, etc.) Standards and Guidelines Component 9 for Ecosystem Service Payments or Markets Awareness of Ecosystem Service Values, Payments & Markets Component 10 (among policymakers as well as potential sellers and buyers)

Forest Trends, 2005

### **Barriers to PES**

- Lack of enabling policy and legal framework – including clear property rights
- Lack of market information
- High transaction costs
- High investment costs

### Requirements for PES

- Environmental services clearly defined
- Rights to buy and sell environmental services clearly defined
- Buyers and sellers clearly defined
- Safeguards for buyers, sellers and investors
- Financial mechanisms clearly defined -flexible frameworks for different types of payment options

## **Property Rights**

- Rights to land, water, forest and other resources
- Rights to access environmental services
- Rights to buy and sell environmental services
- Rights to control management of resources owned by others

# Direct Sales between a Buyer and a Seller

#### **Contracts**

- Clear legal rights to sell environmental services
- Contract law
  - Simple and flexible
  - Detailed and binding
  - Clear liability in case one party does not honor the contract
- Adequate enforcement of contract law
- Contracts recorded in land registers

## **Public Payments**

#### Require legislation

- Allocate budgets
- Establish administrative rules and responsibilities
  - Define what environmental services may be sold
  - Specify who may sell and who may buy
  - Specify terms of payment
  - Specify how the agreements will be monitored
  - Specify penalties if one party does not comply

### Other PES Arrangements

#### Community Arrangements

- Formal contracts
- Informal agreements
- Customary law may need to be considered

#### Markets

- Require legislation/regulations for environmental service credits
- Legislation must specify what types of services may be traded and establish trading rules

#### Eco-certification of products

- Legislation helpful but not necessary
- Guidelines, rules and procedures required

# China Public payment type

- 1998 Forest Law amended to enable a Forest Eco-compensation System
- System pilot tested 2001-2004
- Forest Ecological Benefit Compensation Fund created in 2004

## Costa Rica Public payment type

- Forest Law 1996 enables PES through National Fund for Financing Forestry (FONAFIFO)
  - Contracts with land users are processed regionally according to guidelines established by the Ministry of Environment and Energy
  - National Protected Areas System and NGOs act as contracting agents
  - Participants must submit detailed management plans

### **Ecuador**

### Public payment type

- National Biodiversity Policy provides for markets for environmental services
- 1999 regulatory reform allowed the public sector to allocate resources to private sector financial mechanisms
- National Water Fund (FONAG) created in 1999 to manage PES for the watershed supplying Quito
- Public utilities that are water users allocate 1% of water utility revenues to FONAG
- Each contributor to FONAG is a member of the Board of Directors and has votes proportional to its contribution

### **Mexico**

### Public payment type

- Mexican Forest Fund established 2002, began operating in 2003
  - National Water Commission determines priority areas
  - People apply to be paid for the environmental services their land provides
  - National Forest Commission signs renewable contracts with land owners to manage land to maintain watershed services
  - Payment depends on the original land use

### Other Examples

- Bolivia piloting a system similar to Ecuador
- Colombia charges for forest watershed services. Electricity companies and hydropower plants allocate 3% of their revenues. Bogotá piloting a system similar to FONAG in Ecuador
- El Salvador payments for watershed conservation financed by increase in rates for water use

## Evaluating the National Context for PES

- Is PES integrated in national and sectoral conservation & development strategies?
- Do national and sectoral policies facilitate PES?
- Is there a national framework for PES to ensure coordination and avoid conflicts?

## Evaluating the National Context for PES

- Do landowners have clear legal rights to sell environmental services?
- Do communities have legal rights to sell environmental services? To approve or reject PES agreements?
- Are there government agencies that can manage public payment-type PFS?

## **Evaluating the National Context for PES**

#### Does national law:

- –Recognize the ecosystems that provide environmental services?
- -Recognize resource user groups?
- –Enable municipal/local government to implement PES?

## Evaluating the National Context for PES

#### Does national law:

- -List environmental services?
- –Treat PES as taxes, fees, charges or market prices?
- –Enable economic instruments related to PES?
- -Enable multiple payment options?

## **Evaluating the National Context for PES**

#### Does national law:

- Enable re-investment mechanisms that support sustainable use of natural resources?
- Enable valuation of environmental services?
- Enable incentives for carbon sequestration?
- Facilitate approval of land use changes for the purposes of PES agreements?

#### Last words...

- Public payment-type PES arrangements require law and/or regulations
- Contract law as legal basis for direct payment PES arrangements may not be sufficient
- Many direct payment PES arrangements are:
  - ad hoc
  - not monitored to ensure delivery
  - not structured to take into account the time required to deliver environmental services

## Thank you!
