

Marine Spatial Planning Toolkit

Angela Schultz-Zehden, s.Pro

LME 19 Cape Town, 29 November 2017

Key MSP projects
Implemented by s.Pro

Who are we?

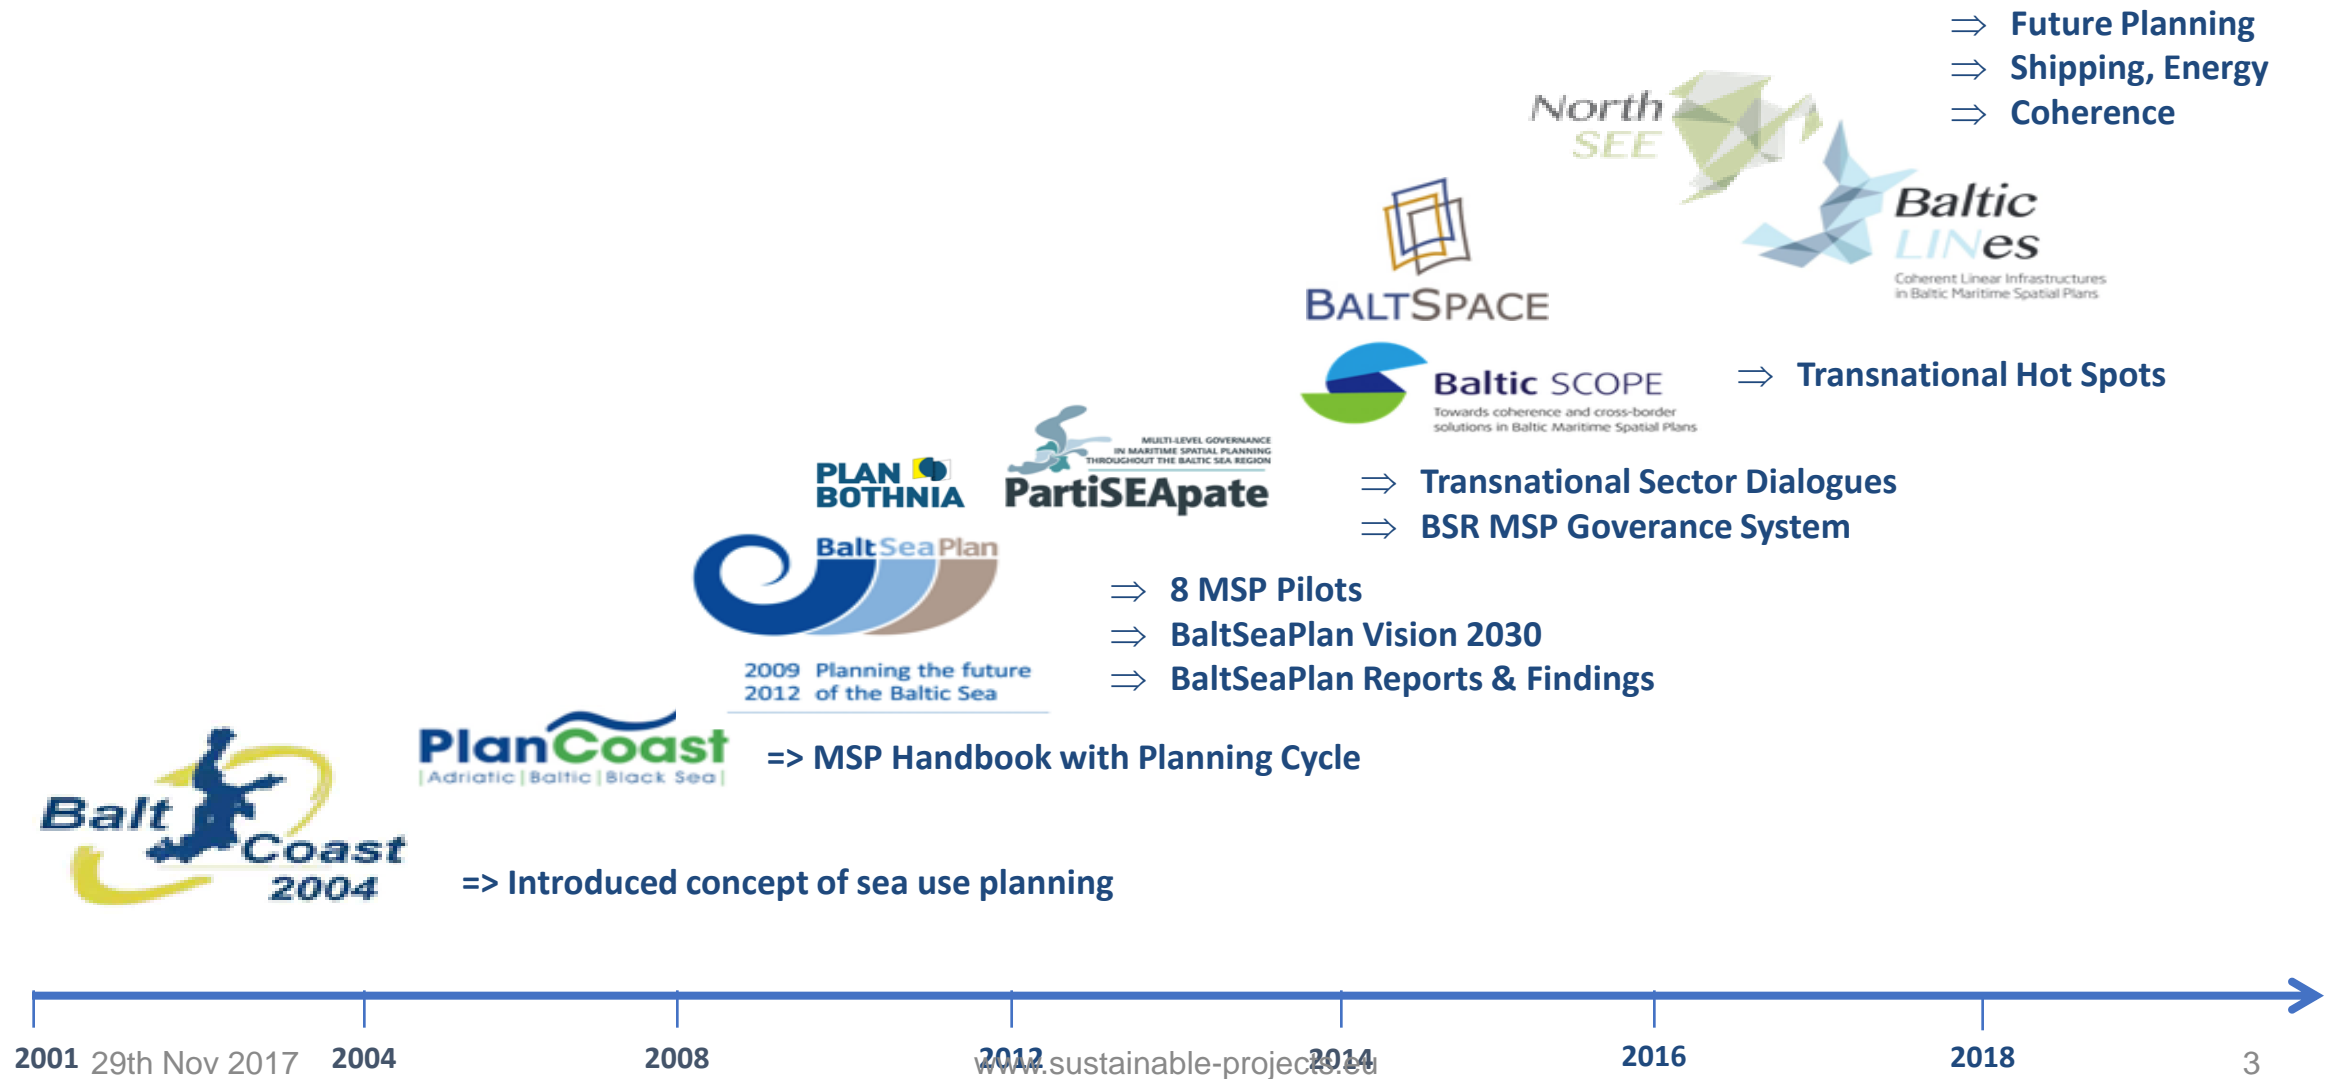

We develop and coordinate
transnational projects and studies on:

- Integrated maritime policy
- Maritime spatial planning
- Blue growth and assessment of future uses
- Innovative and sustainable marine uses
- Integrated management of estuaries

29th Nov 2017

MSP Projects - building on each other

Assisting Member States in the Implementation of the MSP Directive

MSP Database

We invite you to search for examples of MSP implementation experiences from throughout Europe in the extensive [Practices Database](#). Please also explore our [FAQ](#) page, or [Submit a question](#) of your own!

Malta to host 'Our Ocean' 2017 Conference

Commissioner Karmenu Vella has announced that the EU will host the global 'Our Ocean' conference in Malta next year.

MSP in Europe

The European Maritime Spatial Planning Platform provides a single interface to draw together experience and expertise from across Europe and make it available in a readily accessible, implementation-oriented format. It serves as the gateway and exchange forum for all involved in MSP throughout Europe.

MSP Definition

The public process of analyzing and allocating the spatial and temporal distribution of human activities to achieve ecological, economic, and social objectives that are usually specified through a political process.”

Ehler & Douvère 2007, “Visions for a Sea Change”, UNESCO/IOC

Maritime spatial planning means a process by which relevant Member State's authorities analyse and organise human activities in marine areas to achieve ecological, economic and social objectives'“ Source: Art. 3 of the EU Directive on MSP

Our Task for LME:LEARN

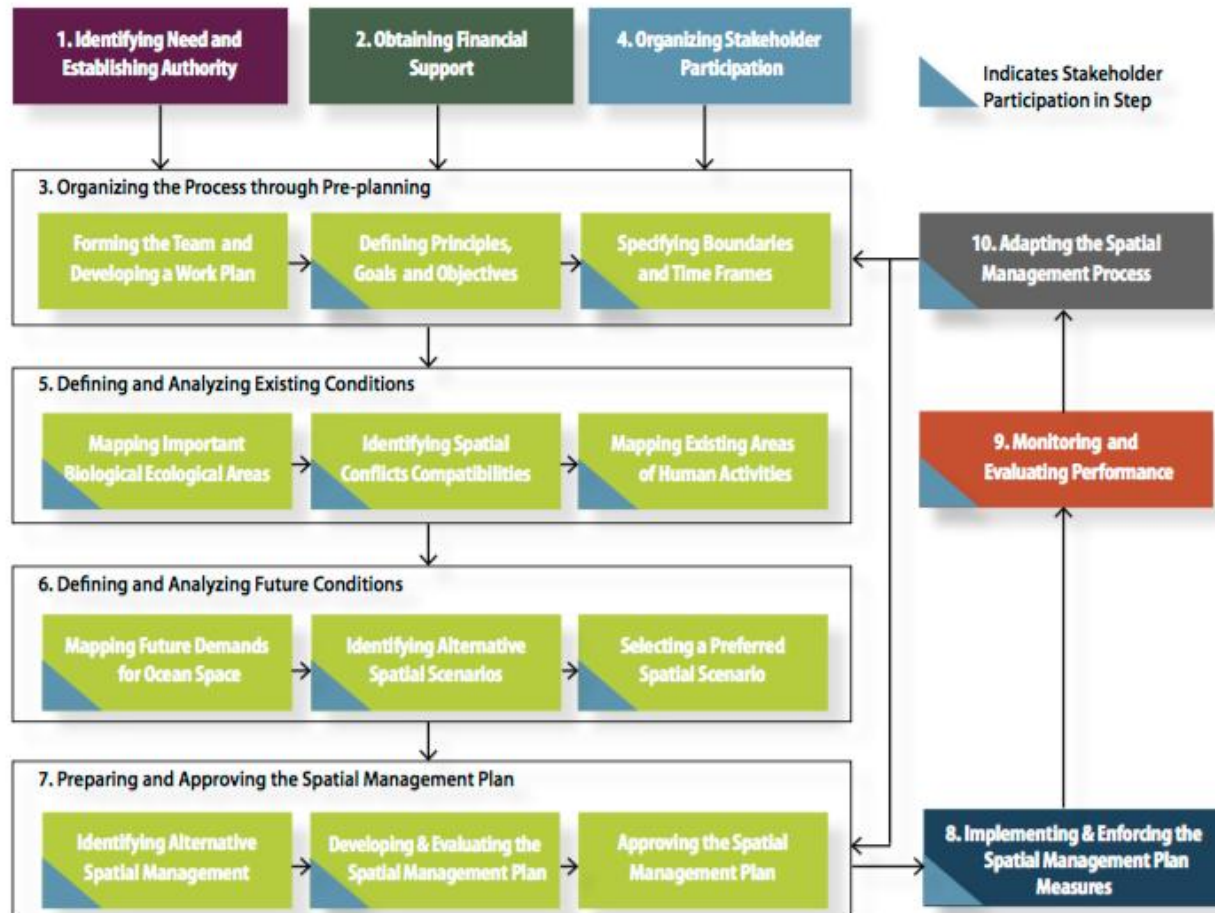

Fig. 1. A Step-by-Step Approach to Marine Spatial Planning

Source: Ehler, Charles & Douvère, Fanny. Marine Spatial Planning: a step-by-step approach toward Ecosystem-based Management. Intergovernmental Oceanographic Commission and Man and the Biosphere Programme. IOC Manual and Guides No. 53, ICAM Dossier No. 6 Paris: UNESCO. 2009 (English)

- Develop a toolkit to **concentrate on the transboundary issues of marine spatial planning (MSP)**, positioning it within the IOC-UNESCO approach

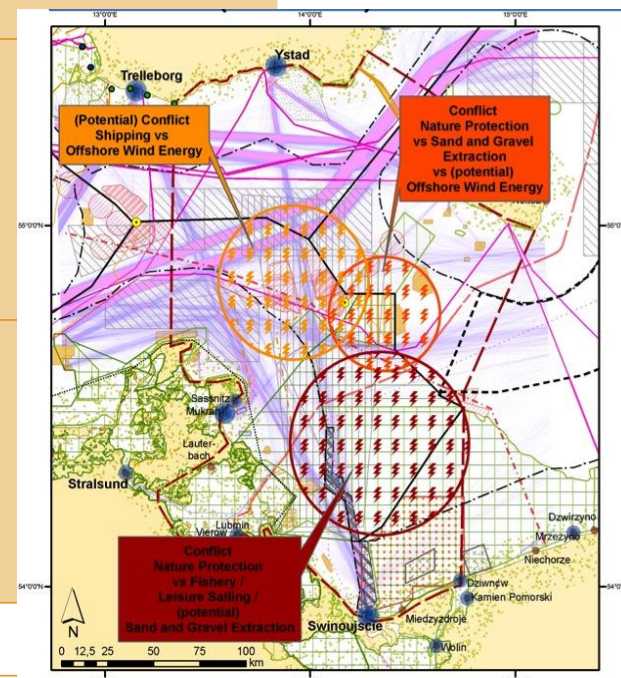

Transboundary LMEs

01 East Bering Sea	18 Canadian Eastern Arctic - West Greenland	34 Bay of Bengal	51 Oyashio Current
02 Gulf of Alaska	19 Greenland Sea	35 Gulf of Thailand	52 Sea of Okhotsk
03 California Current	20 Barents Sea	36 South China Sea	53 West Bering Sea
04 Gulf of California	21 Norwegian Sea	37 Sulu-Celebes Sea	54 Chukchi Sea
05 Gulf of Mexico	22 North Sea	38 Indonesian Sea	55 Beaufort Sea
06 Southeast U.S. Continental Shelf	23 Baltic Sea	39 North Australian Shelf	56 East Siberian Sea
07 Northeast U.S. Continental Shelf	24 Celtic-Biscay Shelf	40 Northeast Australian Shelf	57 Laptev Sea
08 Scotian Shelf	25 Iberian Coastal	41 East-Central Australian Shelf	58 Kara Sea
09 Newfoundland-Labrador Shelf	26 Mediterranean Sea	42 Southeast Australian Shelf	59 Iceland Shelf and Sea
10 Insular Pacific-Hawaiian	27 Canary Current	43 Southwest Australian Shelf	60 Faroe Plateau
11 Pacific Central-American Coastal	28 Guinea Current	44 West-Central Australian Shelf	61 Antarctica
12 Caribbean Sea	29 Benguela Current	45 Northwest Australian Shelf	62 Black Sea
13 Humboldt Current	30 Agulhas Current	46 New Zealand Shelf	63 Hudson Bay
14 Patagonian Shelf	31 Somali Coastal Current	47 East China Sea	64 Central Arctic
15 South Brazil Shelf	32 Arabian Sea	48 Yellow Sea	65 Aleutian Islands
16 East Brazil Shelf	33 Red Sea	49 Kuroshio Current	66 Canadian High Arctic / North Greenland
17 North Brazil Shelf		50 Sea of Japan	

Based on IOC-UNESCO overview; Niras Cross-border MSP study & Our Shared Ocean

DIFFERENT ROLES & RESPONSIBILITIES IN MSP (A POSSIBLE SET UP)

- Multi-Level
- nested approach

Benefits of (transboundary) MSP

*Ecosystem
based –
directs
attention
beyond
borders*

*Creating
synergies –
shared use of
adjoining
resources*

*minimizes &
prevents
conflicts
between
neighbors*

*ensures
transparency
– better
acceptance of
change*

*More efficient
government
planning –
greater
coherence*

*Suitability
Mapping*

*Integrated
Approach:
multi-level /
multi-sector
cooperation*

*Consideration of
regional and
land-sea
interactions*

*Emerging
uses*

*Ensures ocean
space &
resources for
future
generations*

Challenges of transboundary MSP

- Political **borders** do not always match ecosystem borders
 - Tension between national **interests** and **priorities** and shared transnational interests in a given sea-basin
 - Difference in planning **cultures**
 - Different stages and time-lines of MSP implementation (if at all)
 - Communication, data and **information sharing**
- **Our job: practical examples of how transboundary MSP approach can nevertheless be turned into practice**

Toolkit users

- Public authorities → and the planners that support them
- LME practitioners
- Key stakeholders → blue economy sectors
- Citizens
- NGOs
- Academia
- Technical experts
- Sectorial regional commissions

Important considerations

For transboundary MSP in general

No one size fits all approach

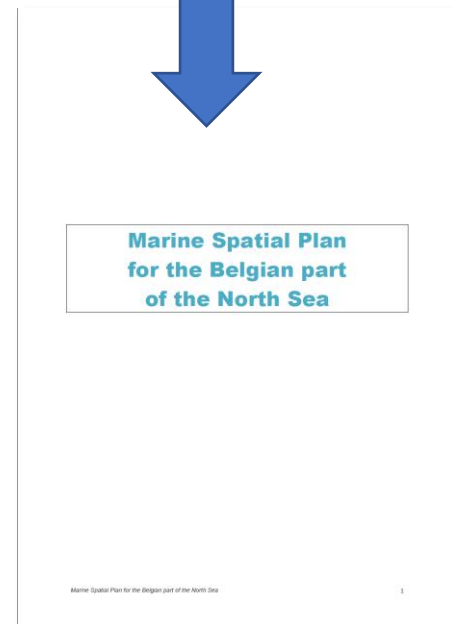

- Differences in environmental **conditions**, **motivations**, **governance** systems
- Authorities at different **stages** of MSP development (if at all)
- Thus highlight **regional specifics**:
 - Conditions in which a practice was developed
 - Enabling conditions to transfer to a different context

- **Toolkit not meant to be prescriptive** - mainly provide **ideas and inspirations** for MSP practitioners around the globe on **what has worked elsewhere** and whether/how this may also serve as an **example for other transboundary MSP processes**.

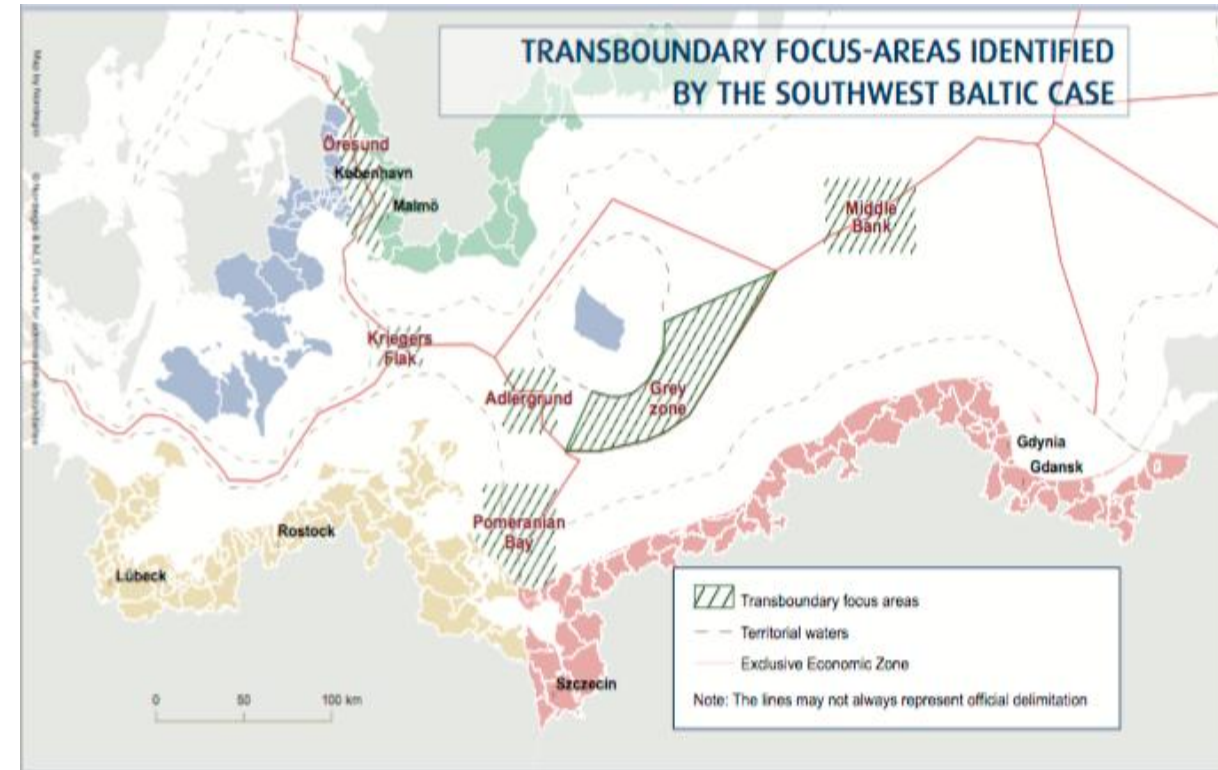

A plan is NOT a map!

- Map shows current uses = Plan 'allocates' uses
- Plan = **map (zones)** AND **planning policies**
- Planning is **about the future**:
 - Point towards suitable locations for uses
 - Allocation from integrated perspective
- It is often **less about solving CURRENT conflicts**,
 - but prevents conflicts to happen in view of future developments
 - Creating synergies
- **More than just spatial aspects** – developing future-oriented goals and objectives also critical for MSP

Distinguish between transboundary and cross-border

- Transboundary can include **two/three countries across one ecosystem**, with different ocean space, economies and drivers
 - Very rare transnational joint planning because MSP is a national jurisdiction
- Cross border (neighboring): **share a common border**
 - Although sometimes borders are not clear

Source: BalticSCOPE

➤ Common ground: **share the same ecosystem**

Distinguish between cooperation and consultation

- Cooperation (informal): **work together in longer run**, usually in a project context, to identify issues and approaches for transboundary MSP
 - Baltic MSP Projects, NorthSEE, AdriPlan, Helcom-VASAB MSP WG
 - Consultation (formal): **step-by-step process** to inform, gather inputs and opinions at authority-to-authority level
 - Espoo Convention, Kyiv Protocol
- End result: coherent set of (national) plans, **not one big ‘detailed’ plan – but common stocktake, strategic planning, planning principles, joint hot spots, joint approach towards joint issues**

Overarching Lessons learned from current transboundary MSP processes

1. Create a permanent **transboundary framework** that promotes interaction and discussion among key stakeholders
2. **Involve stakeholders early**, their knowledge is crucial – and transboundary MSP is complex
3. **Identify sea uses plus conflict and synergy areas – tools: matrix of interest, table of conflict & synergies, structured dialogue meetings**
4. Get **area-wide planning evidence**. Reliable, comparable and up-to-date knowledge on **marine uses, values and future trends** is vital
5. **Limit issues** where you need to find concrete solution
6. Take a **case by case approach**

Our approach

Activities, tasks, deliverables, schedule

Activity a: Drafting the toolkit

- **Task 1**

Review 'state of the art' of MSP, identification of gaps, analysis of the 'step-by-step' approach at regional scale, analysis of good practices, identification of major challenges, proposal for the evaluation of and monitoring template, etc.

1. Desk research

- **Task 2**

Identify the most important steps for the MSP process in transboundary context

2. Analysis

- **Task 3**

Define most appropriate tools to carry out each step of the MSP process and advise the reader how to use it, possibly with good examples to illustrate use of the tools

3. Match tools to steps

- **Task 4**

Prepare the first draft of the toolkit (for review and consultation with the LME: LEARN PCU EBM Working Group)

4. Draft the toolkit

Step 1: Desk Research

Step 1: Desk Research - Sources

European sources

European MSP platform esp. practices from cross-border projects in Baltic LME, Med LME and Black Sea LME and other European sea basins (North Sea, Atlantic)

- **Cross-border MSP projects:**

- PlanBothnia (Sweden-Finland)
- BaltSeaPlan and PartiSEAPate
- SHAPE and AdriPlan (Adriatic)
- TPEA – Transboundary Planning in the European Atlantic (Portugal-Spain)
- BalticSCOPE – towards coherence and cross-border solutions in Baltic Maritime Spatial Plans
- SIMCelt – Supporting Implementation of Maritime Spatial Planning in the Celtic Seas
- MARSPLAN – Cross-Border MARitime Spatial PLANing in the Black Sea (Bulgaria-Romania)
- The Celtic Sea Partnership
- ΘΑΛ-ΧΩΡ (THAL-CHOR) Cross border cooperation for Maritime Spatial Planning Development (Cyprus-Greece)

- **National & sub-national MSP processes** (e.g. Latvian recipe to ecosystem-based approach)

Step 1: Desk Research - Sources

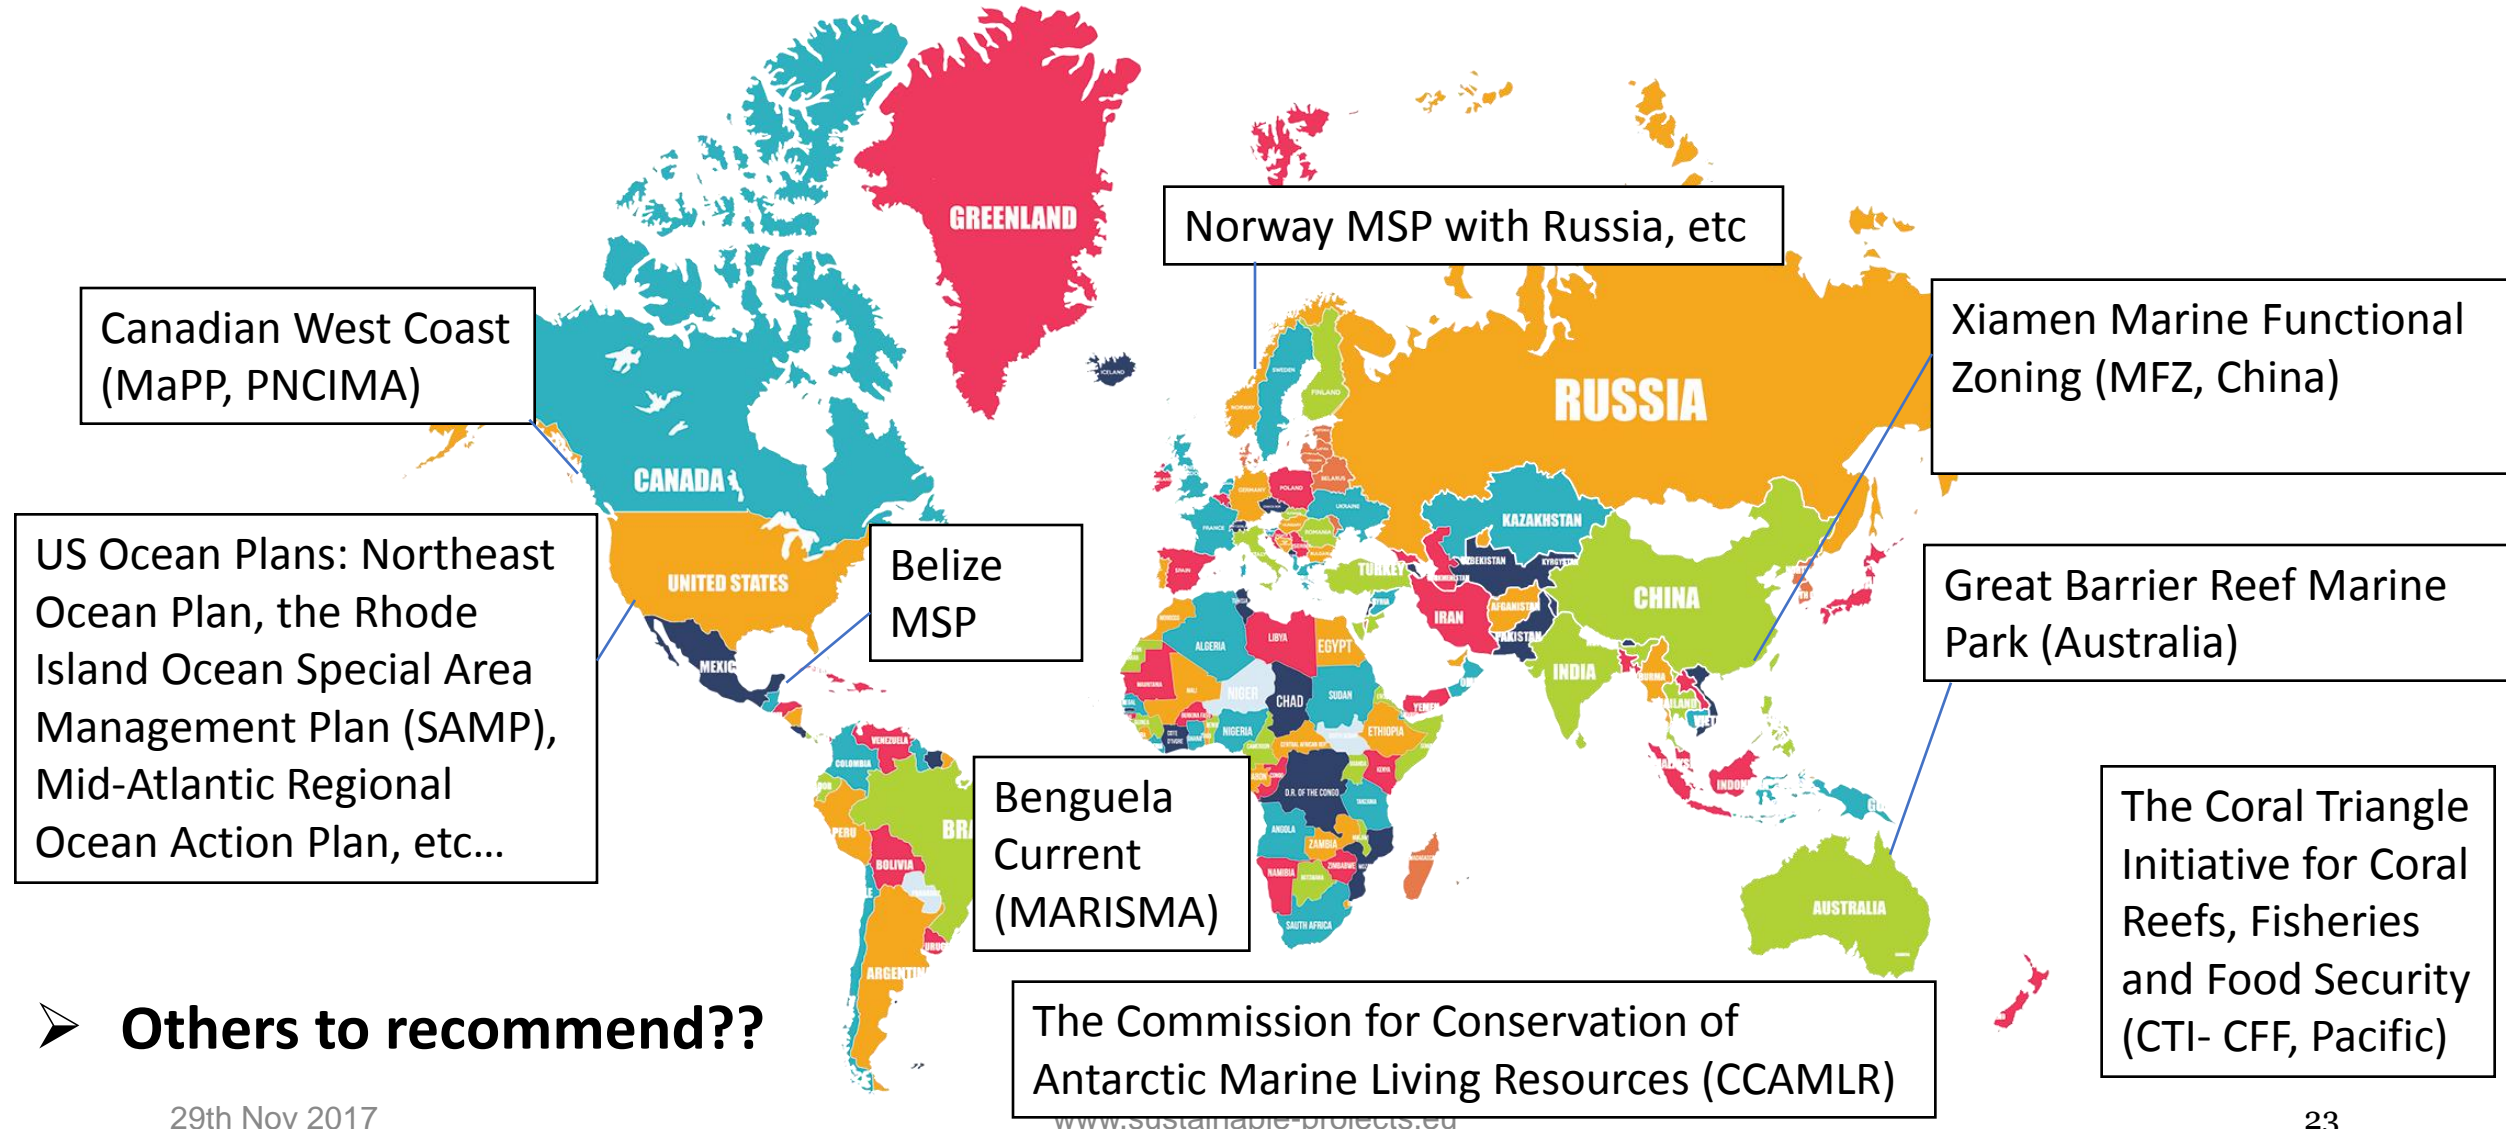

International sources

- IOC-UNESCO MSP Programme website
- EU DG MARE 'Study on international best practices for cross-border cooperation in MSP'
- PANORAMA Marine and Coastal Solutions
- MSP@TNC initiative
- OECD Fisheries Division
- ICES
- World Ocean Council MSP Working Group
- Open Channels
- MSP Research Network
 - **Others to recommend??**

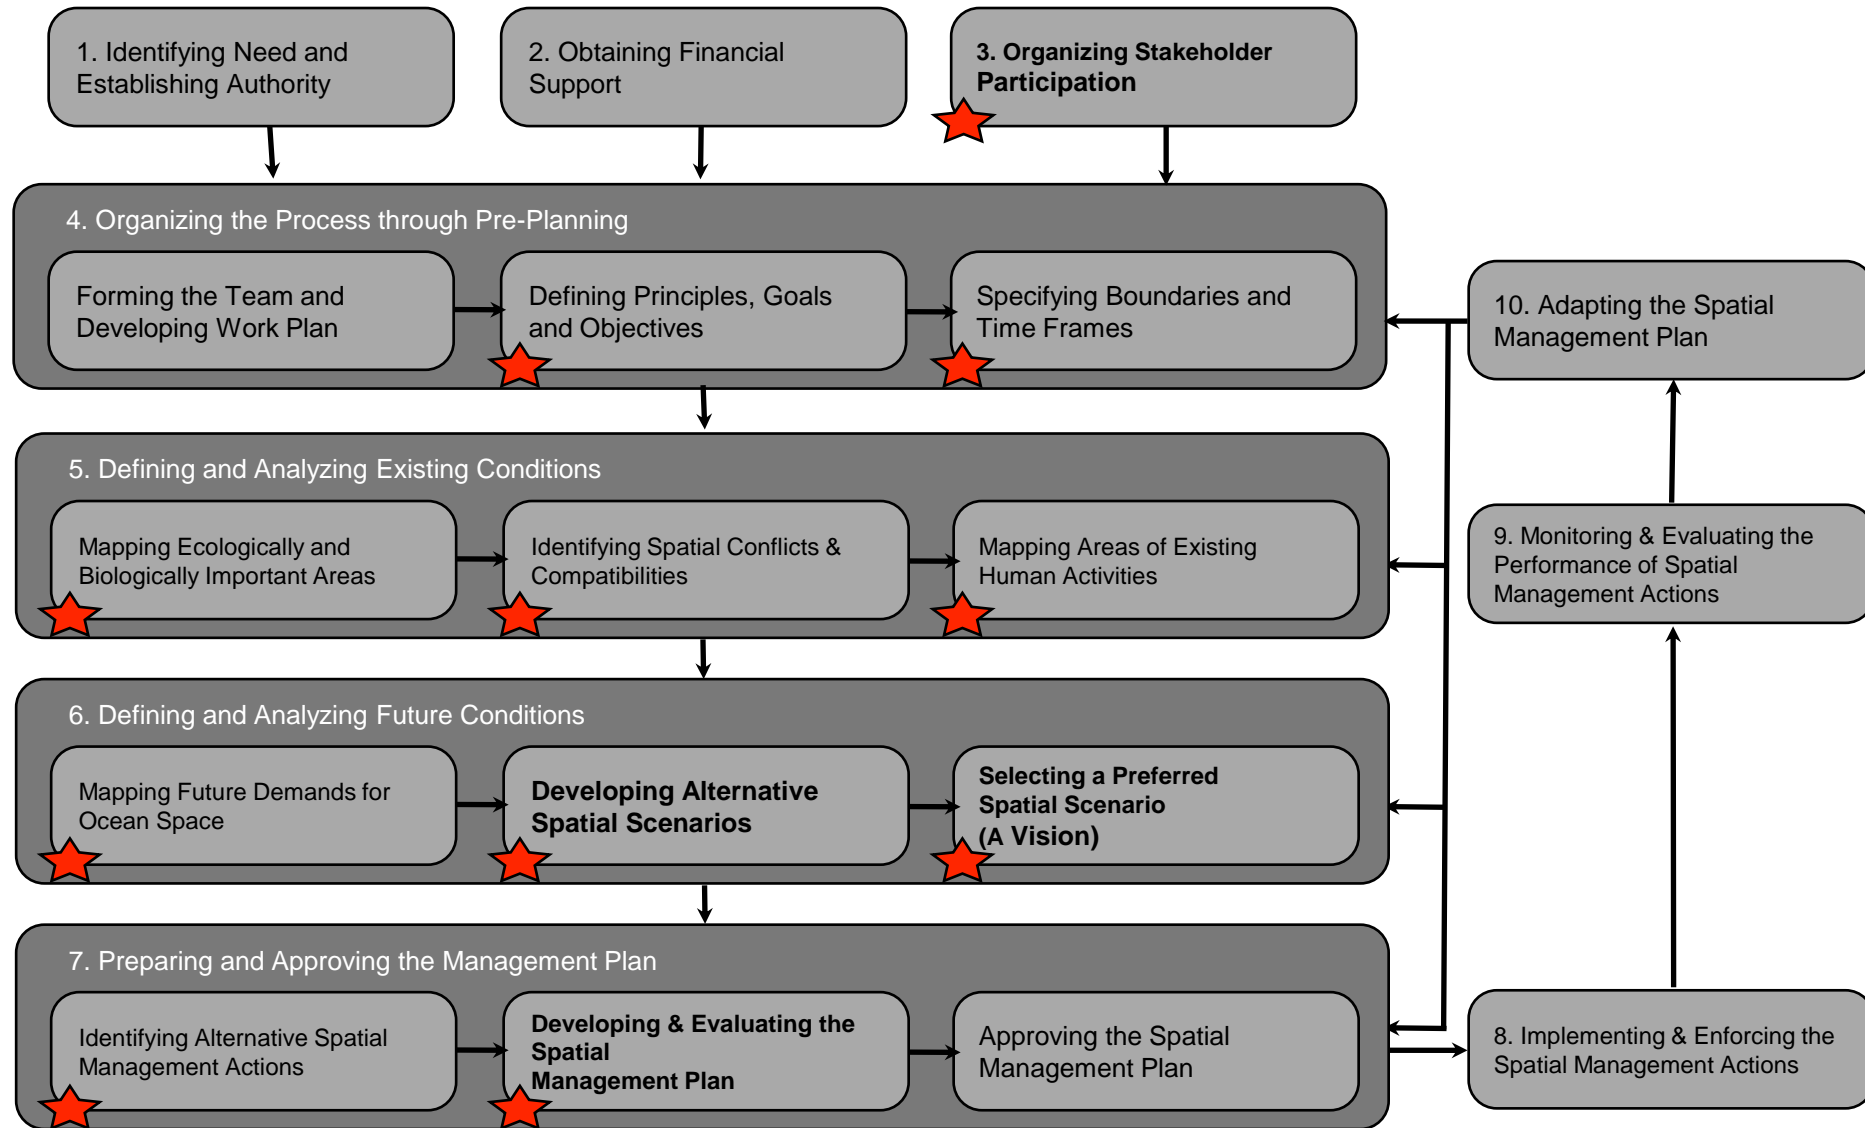

Step 1: Desk Research - Sources

Transboundary / cross-border cases (outside EU)

➤ **Others to recommend??**

Step 2: Analysis of step-by-step approach

Note: The star symbol (★) indicates a step in the MSP process in which stakeholders should be actively engaged.

Source: Ehler, Charles & Douvère, Fanny. Marine Spatial Planning: a step-by-step approach toward Ecosystem-based Management. Intergovernmental Oceanographic Commission and Man and the Biosphere Programme. IOC Manual and Guides No. 53, ICAM Dossier No. 6 Paris: UNESCO. 2009 (English)

Step 2: Analysis of step-by-step approach

Stakeholder engagement

Data coherence

Governance &
authority

Information process
Stocktake – current
& future conditions

Transboundary MSP

Organising the team

Ecosystem approach &
uses
Cumulative impact
tools

Hotspot areas
Boundaries

Visions

Implementation &
Management options

Step 3: Match tools to steps

Step	Special transboundary considerations	Examples (including success factors and enabling conditions)
3. Organising the process through pre-planning	<p>Mutli-level / multi-scale:</p> <ul style="list-style-type: none"> •not 'one' single MSP – but multiple layers (subsidiarity principle) •from international / strategic planning to local level more detailed planning 	<p>Legal infrastructure is the 'backbone' of national planning (BaltSeaPlan vision 2030)</p>

➤ Additional examples presented later

Step 4: Draft the Toolkit

- Separate chapters for each step of the MSP cycle
 - **specific challenges for a transboundary approach** to that step
 - several **examples of tools and good practices** from various geographical locations, with **success factors and enabling conditions**
 - A set of open **questions / challenges** we may have encountered
 - present a picture as complete as possible from our desk research...
 - BUT ALSO will **benefit from the personal experience and broad background** of LME:LEARN partners
- Emphasis of the first draft will be on **content, rather than style -> depends on discussions of this meeting**

Thank you! Questions? ... Let's talk in Break Out Session
